To Whom it May Concern:

The City of Taylorsville is entering its third year of contracting with Precision Concrete Cutting to address the problem of trip hazards along the public right-of-way.

The City's initially had Precision Concrete Cutting concentrate their efforts on trip hazards along "safe walking routes" the designated by the school district and the City public works department. The elected officials and the residents were so pleased with the cost effectiveness and superior results over other methods of trip hazard removal, that we have expanded our contract to eventually include all sidewalks within the City over the next several years.

Sincerely,

John Inch Morgan  
City Administrator
